Poseidon Textile Care Systems® introduces new 80-pound capacity wetcleaning machine to soft-mount line

Troy, Mich.— Poseidon Textile Care Systems® (Poseidon) recently introduced a new 80-pound capacity Poseidon Wetcleaning Machine to its line of soft-mount wetcleaning machines. The soft-mount line now boasts 20-, 30-, 40-, 60-, 80- and 90-pound capacity models, all of which bring highly programmable controls, superior efficiency, up to 400 G-force extract and unrivaled production per linear foot.

Unlike hard-mount wetcleaning machines, which require 18-24 inches of separation between machines for bolt-down maintenance and foundation stress requirements, Poseidon soft-mount models are installable right next to each other, according to Poseidon co-owner Jeff Quail. "The new 80's small footprint and soft-mount design allow fabricare specialists to greatly enhance wetcleaning throughput within a smaller space," he said.

All Poseidon soft-mount wetcleaning machines feature the highly flexible Inteli Control, featuring 20 pre-programmed cycles and up to 79 individually modifiable cycles. Advanced programmability ensures Poseidon Wetcleaning Machines properly clean virtually any fabric type. Operators can program water temperature by degree, wash rotation speed and duration, water levels, bath cool-down by degree, and up to six extract speeds. Additionally, the SmartLoad system automatically tells operators when the machine is loaded to 25, 50 or 100 percent capacity.

Poseidon soft-mount wetcleaning machines slide easily into place without the need for reinforced concrete foundations, grout and bolt down – allowing for future relocation and lower installation costs. Additionally, when compared with most hard-mount machines, which generate 75-200 G-force extract, soft-mount Poseidon Wetcleaning Machines generate extract speeds up to 400 G-force. In doing so, they improve wetcleaning productivity and decrease natural gas and electricity usage.

Designed for efficiency, the new 80-pound capacity Poseidon Wetcleaning Machine features a sump-less design to save up to 3 gallons of water per fill. AquaFall and AquaMixer systems further curb water usage. AquaFall releases water into the load via holes in the drum lifters. As the drum turns, lifters release water from above to better penetrate fabric. With Poseidon, laundry is saturated from above and below. This cuts water usage and rinse cycle times while improving wash quality. AquaMixer further improves efficiency by mixing hot and cold water before entering the drum. This achieves very precise water temperatures – offering greater control over hot water consumption.

The Poseidon Textile Care System – delivering an environmentally safe and non-toxic alternative to dry

cleaning – offers superior results, efficiency and productivity. Poseidon products, which safely wetclean, iron and dry even the most delicate fabrics, are manufactured in an environmentally friendly manner and often qualify for Leadership in Energy and Environmental Design (LEED) credits.
